

AirwellTM

by  Radon Environmental

Airwell is a new technology mitigation system for radon in well water. It is the only system on the marketplace that mitigates the radon outside the home in the well. It reduces radon levels by 92-99%. It is a virtually maintenance-free, low voltage system that saves energy and space while protecting the homeowner.

Airwell™

by  Radon Environmental

- 92-99% radon reduction.
- Aerates water from aquifer – radon levels continue to drop over time.
- Low voltage – consumes energy of a 60W light bulb.
- Performs methane and sulphur mitigation + precipitates iron out of water.
- Runs 24/7 – patented aeration chamber requires no maintenance or cleaning.
- Pumps air 30' below water level.
- Does not affect a constant pressure system in the home.
- Flexible in well depth and radon level that can be mitigated.
- **Optional Airwell Noise Reduction Kit:** rock enclosure baffles noise by 50% from standard installation with exposed Airwell driver box.
